Contrasting North of the North Saskatchewan with balance of Alberta.

Nº 9

CALGARY, ALTA. 22nd June 1917

Province of Alberta. Census June 1916

Taking that portion of Alberta lying North of the North Saskatchewan River, and that portion of the constituency of Edmonton East lying south of said River, being Composed of the whole of the constituencies of Edmonton East. Edmonton West, portions of Battle River, Strathcona and Red Deer.

The population of the Battle River constituency in 1911, including Indians, of which there are a considerable number was 3084, or 11.7% of the whole population of that constituency. The increase on the whole of the District from 1911 to 1916 was 54%. There is no doubt that the increase in that constituency north of the North Saskatchewan River, during that period has not been nearly so great as the balance of the constituency. I have, however, taken the increase at 40% which would make the population of that portion in 1916. 4,357 or 10.7% of the whole constituency. This is a liberal allowance for the population of that portion of the constituency.

In 1916 the rural population of the whole constituency was 36,492. 10.7% is 3,905, which I have assumed as the rural population.

If 7% of the total annual output for the whole constituency was accorded to this portion, it would be ample, and which would amount to $984,389. That amount has been taken for the annual output.

The population of the constituency of Strathcona, north of the Battle River is practically nil, and its agricultural output ditto.

As to the Red Deer constituency, there is no data by which it can be at all accurately arrived at. In 1911 it was nil, but now there are two coal mining camps and a railway division point. I have recently been over the territory under discussion and consider 3,000 ample population. The rural population would not amount to more than 400. The agricultural output of this portion of the constituency is practically nil.

The total population of this district amounts to 112,708, the rural population 64,032.

The mileage of railway under operation in that territory is 1758.

The annual agricultural output amounts to $8,053,295.

The area of land available for settlement in the territory mentioned is 23,035,146 acres, or 35,992 square miles. On that basis there are 36.3 rural population for each mile of railway, and 64 of the total.

The value of the annual output in dollars equals $4581.00 for each mile of railway. The per capita rural annual output is $125.77, and for the total population $71.45.

The population per square mile of lands available for settlement equals 3.1 counting the total, and for rural 1.8.

In this estimate the rural population includes the miners in the coal camps at Lovett, Mountain Park, Jasper, Brule Lake, Entwhistle, Lake Waubamum, St. Albert, Cardiff, and vicinity of Edmonton.

Contrasting North of the Southerly limit of Tp. 40, with balance of Alberta.

The northerly limit of Tp.39 is practically an east and west line half way between the centre of the City of Calgary and the centre of the City of Edmonton.

Battle River constituency has, south of the northerly limit of Tp.39, an area of 1,784,024 acres. South of the Saskatchewan River this constituency has an area of 4,671,300 acres. The former number is 38.2% of the latter. The total population in this constituency north of the River in 1916 has been estimated at 4,357, of which 3,905 are classed as rural. Deducting those from the total population and taking 38.2% of the remainder makes a population of 13,863 and 12,448 respectively.

7% of the annual output lies north of the Saskatchewan river, leaving 93% south. 38.2% of 93% of the total gives for annual output of stock $3,528,985, for annual output of grain $9,549,327 and

The railway mileage in Battle River constituency south of the northerly limit of Tp.39 equals 143 miles. leaves the population and output. $13,078,312.

In Red Deer constituency North of the northerly limit of Tp.39 there are of lands available for settlement 1,291,070 acres, or 27.2% of the total. & As nearly as can be estimated about south of that line a total population of 31,240, and a rural population of 24,867.

The annual output of stock $3,066,076, annual output of grain $4,225,017, and of the two combined $7,291,093.

The railway mileage in that portion of Red Deer constituency is 411 miles.

Adding the portions of Battle River and Red Deer constituencies to the six southerly constituencies, makes a total population of 265,705, or 53.5% of the total population of the Province, and a rural population of 158,142 or 50.2% of the total rural population of the Province.

Annual output of stock $23,786,192, or 69.2% of the total. Annual output of grain $68,283,817 or 81% of the total. The two combined $92,070,009 or 77.5% of the total for the Province.

Schedulizing the above:--

Contrasting North of the Southerly limit of Tp. 36, with balance of Alberta.

In 1901 an east and west line corresponding with the northerly limit of Tp.43 divided the population of Alberta into two equal parts, north and south. In 1906 the northerly limit of Tp.40 made that subdivision and in 1911 the northerly limit of Tp.35.

The northerly limit of Tp.35 takes in all of the six southerly constituencies in Alberta, and about 42.9% of that of Battle River lying south of the northerly limit of Tp.39, and 21% of that of Red Deer. Taking said percentages of those constituencies and adding them to the six southerly ones, it works out as follows,--

Alberta	Population Total	Population Rural	Annual Output Stock	Annual Output Grain	Annual Output Combined	Miles Rly	Annual Output per capita Total Population Stock	Total Population Grain	Total Population Combined	Rural Population Stock	Rural Population Grain	Rural Population Combined	Annual Output per Mile Rly Stock	Grain	Combined	Area available for settlement Acres	Sq. Calgary 25 June 1917

The railway mileage in Battle River constituency south of the northerly limit of Tp.39 equals 143 miles.

In Red Deer constituency north of the northerly limit of Tp.39 there are of lands available for settlement 1,291,070 acres, or 27.2% of the total, & As nearly as c
leaves south of that line a total population of 31,240, and a rural population of 24,867.
The annual output of stock $3,066,076, annual output of grain $4,225,017, and of the two combined $7,291,093.
The railway mileage in that portion of Red Deer constituency is 411 miles.

Adding the portions of Battle River and Red Deer constituencies to the six southerly constituencies, makes a total population of 265,705, or 53.5% of the total pop
50.2% of the total rural population of the Province.
Annual output of stock $23,786,192, or 69.2% of the total. Annual output of grain $68,283,817 or 81% of the total. The two combined $92,070,009 or 77.5% of the

Contrasting North of the Southerly limit of Tp. 36, with balance of Alberta.

In 1901 an east and west line corresponding with the northerly limit of Tp.43 divided the population of Alberta into two equal parts, north and south. In 1906 the northerly limit of Tp.35.
The northerly limit of Tp.35 takes in all of the six southerly constituencies in Alberta, and about 42.9% of that of Battle River lying south of the northerly li
percentages of those constituencies and adding them to the six southerly ones, it works out as follows,--

Alberta	Population Total	Population Rural	Annual Output Stock	Annual Output Grain	Annual Output Combined	Miles Rly	Annual Output per capita Total Population Stock	Grain	Combined	Rural Population Stock	Grain	Combined	Annual Output per Mile Rly Stock	Grain	Combined
